

## Certified Risk Management Specialist Course

---

### Course Description:

The ISO 31000:2018 utilizes internationally recognized and appreciated principles to provide a common approach to risk management processes. Thus, it supports the Risk Management needs of standards such as the ISO 22301, ISO 27001, ISO 20000 etc. Using ISO 31000, organizations can put in place effective risk management frameworks and corporate governance, and compare their risk management practices with an internationally recognized benchmark.

The course establishes the relationship between Business Continuity Management and Risk Management i.e. between the standards ISO 22301 and ISO 31000. It helps the participants to understand how these two standards support each other.

Presented in an easy to understand step-by-step manner, our ISO 31000 course simplifies the risk management process and offers step-by-step solutions. Teaching methodologies include presentation based discussions assisted by interactive exercises / hands on experience with an objective to build skills and explore the specific risk issues and solutions being faced by delegates.

Since this course is based on ISO 31000 - risk management standard along with its usefulness to the organizations, it also helps them leverage the ISO 31000 Standard to maintain an efficient ERM process.

### Learning Objectives:

Smart organizations now recognize that one of the most critical business enablers in today's increasingly risky world is to have in place a solid Risk Management (RM) framework. Of the various frameworks available, the ISO 31000:2018 is possibly the world's most well-respected and popular framework for holistic risk management across the entire enterprise

- Introduction to Risk Management as per ISO 31000
- Risk Management Structure
- Understanding risk impact on the business
- Integrating risk management into everyday operations
- Managing the different types of risks
- Acquiring competence to implement and maintain an effective ERM program

### Who should attend:

The course has been designed for companies ready to embark on a promising business sustainability journey and would like to empower their senior management executives with the necessary know-how, inputs, and insights to achieve the overall business goal. It invites the participation of C-suite Executives, the Leadership team, and Board members.

Senior management teams from Operations, Risk Management, Business Continuity, Crisis Management, Emergency Management, IT Disaster Recovery, etc., who are accountable to implement effective Business Continuity and Resilience within their organizations.

- Senior Management: Who may comprise the Risk Management Team of the organization, responsible for managing organizational risks and threats at a Leadership level.
- Operational Managers: Responsible for on-the-ground Risk Management and Emergency Response such as Physical Security, Facilities, HR, and Administration.
- Risk/Crisis/ITDR/Information Security/BCM Team: Members of various Resilience domains should opt for this.
- IT and Information Security professionals: Members, Coordinators, Support teams, etc.
- Auditors: Internal and External Auditors responsible for auditing Risk Management practices.
- Lead Auditors/Auditors: Responsible for other Management Systems.
